**WHAT MAKES THE HORSE SHY.**—A correspondent says there never was a shy horse that was not near sighted. Such horses do not see the object until getting right near to it. Nothing will break the horse of this habit unless the blinders are discarded and an open headstall used. Treat the horse kindly. Never whip him, but try to coax him up to the object, that he may smell of it. One of the worst shyers was broken by leading, riding and driving in a meadow among stone, stumps, boxes and buffalo robes in different positions every day, the horse being led up to them and allowed to eat the coats off the object. Let any one examine a well-behaved horse's eye and you will find a "shyer's" eye, and note the difference.—*Michigan Farmer.*

**THE USE OF THE LEMON.**—A piece of lemon bound upon a corn will remove it in a day or so. It should be renewed night and morning. The free use of lemon-juice and sugar will always relieve a cough. A lemon eaten at breakfast every day for a week or two will entirely prevent that feeling of lassitude peculiar to the approach of spring. Perhaps its most valuable property is its absolute power of detecting any of the injurious and even dangerous ingredients entering into the composition of so very many of the cosmetic face-powders in the market. Every lady should subject her toilet powder to this test. Place a tea-spoonful of the suspected powder in a glass, and add the juice of a lemon. If effervescence takes place it is an infallible proof that the powder is dangerous, and its use should be avoided, as it will ultimately destroy the skin and destroy the beauty of the complexion.

## ECLIPSES IN 1881.

In the year 1881 there will be two Eclipses of the Sun and two of the Moon, and a transit of Mercury across the Sun's disc.

1. A partial Eclipse of the Sun, May 27, 1881, invisible at St. John.

Begins on the Earth generally, May 27th, 5h. 21m. A, mean time at St. John, in longitude 104° 21m E, and latitude 39° 14m N.

Greatest Eclipse, May 27th, 7h 24m A, magnitude (Sun's diam. = 1), in longitude 13° 12m E, and latitude 68° 19m N.

Ends on the Earth generally, May 27th, 9h 28m A, in longitude 94° W, and latitude 46° 21m N.

2. A total Eclipse of the Moon, on the night of June 11th, 1881, visible at St. John.

## EXPLANATORY.

Apogee—That point of a Planet's orbit farthest from the Sun.

Perigee—That part of the Moon's orbit farthest from the Earth.

Astronomical Day is reckoned from noon to noon through the 24 hours. Thus

July 21, 9h, is 9h A of July 21, and July 21, 15h, is 3h M of July 22.

Conjunction—A Planet directly between the Earth and the Sun is said to be in Inferior Conjunction with the Sun. A Planet with the Sun directly

between it and the Earth is said to be in Superior Conjunction with the Sun. Planets are said to be in conjunction with each other, or with the

Moon, when they are in the same sign and degree.

Distance—The distance of a heavenly body from the Equinoctial, measured north or south, in degrees or minutes, on a Meridian.

Ecliptic—The plane of the Earth's orbit, so called because Eclipses can take place only when the Moon is on or near it.

Distance—The distance of a Planet from the Sun as seen from the Earth.

Equinoctial—The circle in the heavens traced by the Earth's Equator.

Node—That part of the orbit of a heavenly body which intersects the Ecliptic.

If the body is passing from south to north, it is called the Ascending Node; if from north to south, the Descending.

Opposition—A Planet with the Earth directly between it and the Sun is said to be in Opposition to the Sun.

Penumbra—That portion of space around the shadow of the Earth, passing through which the Moon diminishes in brightness, in consequence of a part only of the Sun's rays reaching her surface.

Perigee—That part of the Moon's orbit nearest to the Earth.

Perihelion—That part of a Planet's orbit nearest to the Sun.

Quadrature—Two heavenly bodies are said to be in Quadrature when they are distant from each other by one-fourth of the Zodiac, or three signs apart.

Rise—The Declination and fast or slow of clock are given for apparent noon, and time of passing the Meridian of St. John.

Set—The Moon's Southing is given in Astronomical time for the Meridian passage at St. John; and her Declination, when on the Meridian.

Age of the Moon is given from Full Moon to New Moon; and the setting, from New Moon to Full Moon.

Tides in the Calendar are the Morning and Afternoon Tides at St. John and Charlottetown. In the Tide Table (page 12) will be found Constants for finding the approximate time of High Water at each of the places given in the Table.

It will sometimes be found that when a Constant is added to the time of High Water at the Port of reference the sum exceeds 12 hours; in this case subtract 12 hours from the sum and the remainder will be the time of High Water at the required Port on the succeeding afternoon or morning, according as the Tide at Port of reference was a Morning or Afternoon Tide.

#### FORECASTING THE WEATHER.

Men have, from a very early period, studied the weather, on account of its great influence on their pursuits, in order if possible to predict its nature and prevent those losses to the Farmer and the Sailor which result from violent storms.

The earlier students based their predictions on the phases of the moon, but an examination of the Greenwich observations for more than half a century has shown that this theory is entirely unfounded. Weather prophets Moore, Zadkiel and Vennor claim in their Almanacs to be able to forecast the weather day by day for a whole year; but meteorological science in the British Isles, and the Signal Service of the United States, with the Weather Bureau of the Dominion, does not claim to forecast, with any certainty, the weather for more than three or four days at the most.

If an observer could obtain, at regular and repeated intervals, readings of the Barometer at stations distributed over a large area, he would be enabled to trace the march of the storm, for it has been found that the wind always blows towards the place of the lowest barometer reading; and so, by means of the telegraph, he may warn those places the storm is approaching. Still, mistakes are often made, and the forecasts are not always infallible, so that much remains to be done before meteorology can be ranked among the exact sciences.

#### TIDE TABLE.

The time of High Water at the following places will be found approximately by adding to or subtracting from the time of High Water at the given Port of Reference, as follows:

Sign, +, add; Sign, —, subtract.

*Derby Wharf Light*; on the end of Derby Wharf, Salem upper harbor; tower; fixed red light, visible 9 miles.

*Marblehead Light*, on Marblehead Neck, south side of entrance to Marblehead, and to Salem South Channel; white tower; fixed white light, visible 10 miles; good anchorage half a mile W by S from this light. To enter harbor after passing Half-Way Rock, bring this light to bear W by N  $\frac{1}{2}$  N and run until the light bears S W half a mile, then run N W until the light bears by W, then run S W  $\frac{1}{2}$  W into the harbor.

*Egg Rock Light*; white tower; fixed red light, visible 12 miles; guide to Swampscot anchorage and to Broad Sound. Leave it  $1\frac{1}{2}$  miles on the starboard hand on entering Broad Sound.

*Minot's Ledge Light*; latitude  $42^{\circ} 16m 9s$  N; longitude  $70^{\circ} 45m 3s$  W; entrance to Boston Bay; granite tower, natural color, 100 feet high; fixed white light, visible 17 miles. Davis' Ledge Buoy bears E by S; Boston Light bears N W  $\frac{1}{2}$  W, 7 miles. This course must be kept good, northerly, to Bell Boat, off the north side of the Hardings Ledge (about  $4\frac{1}{2}$  miles from Minot's Ledge Light). A good mark to clear the Hardings Bell Boat, passing Minot's light, is to keep Long Island Head light (fixed white light) open to the north of the Narrows light, which is a red light.

*Boston Light*; latitude  $42^{\circ} 19m 39s$  N; longitude  $70^{\circ} 53m 25s$  W; on Brewster Island, north side of entrance to main ship channel to Boston; white tower; white flash light, flashing once every half minute, visible 17 miles. When the light bears north one half mile, run west until Long Island Light opens out south of the Narrows light, then run for it leaving the Narrows light on the starboard hand. Also, an air trumpet, giving blasts of 7 seconds followed by interval of 43 seconds.

*Narrows Light*; brown house; fixed red light, on the right hand of the Narrows, in ship channel entrance to Boston harbor. When this light bears north, run N W  $\frac{1}{2}$  W until the east side of Galloup's Island bears S by W, then run N W by N until Long Island light bears W by S  $\frac{1}{2}$  S.

*Long Island Light*; on the N E end of Long Island and southern

## CERTIFICATES.

Messrs. ROBERT V. BARKER & Co., 96 Prince Wm. Street, St John, N. B.

*Dear Sirs,*—One bottle of Dr. Newcomb's Anti-Bilious Mixture has effectually cured of Indigestion and Biliousness.  
St. John, N. B., Nov. 15th, 1877.

Yours truly,

JOHN McCONNELL

Messrs. ROBERT V. BARKER & Co.—*Dear Sirs,*

I was suffering from Dyspepsia in its worst form; one teaspoonful of Dr. Newcomb's Anti-Bilious Mixture relieved me within half an hour, and two bottles has made a complete cure.

Yours gratefully,

### CERTIFICATES.

Messrs. ROBERT V. BARKER & Co., 96 Prince Wm. Street, St. John, N. B.

Dear Sirs,—I was attacked with a severe sore throat; my throat was covered with ulcers. Dr. Newcomb's Liniment made a speedy cure  
Portland, N. B., Dec. 10th, 1877.

Yours truly,

J. McGRORY

Messrs. ROBERT V. BARKER & Co.—Dear Sirs,

Your Dr. Newcomb's Liniment is the best I ever used. Two applications of it cured my sprained ankle, and one application cured a pain in my hip. It also cured my niece who was suffering from Rheumatism.

Yours truly,

R. B. BELT

Messrs. ROBERT V. BARKER & Co.,

DEAR SIRS,—I was rendered incapable, from the effects of a severe cold, accompanied by a racking cough, had to leave my vessel and go home. I am thankful to say your "Dr. Newcomb's Cough Balsam" has completely cured me. It also made a cure of a neighbor of mine, to whom I recommended it, who was supposed to be in the last stages of Consumption.

During this month the day decreases in length 1h. 22m.—35 min. in the morning, and 47 in the evening. This difference of 12m. in the decrease is caused by the Sun's being 6 m. slower than the clock on the 1st, and agreeing with it at the end of the month.

### DR. NEWCOMB'S ANTI-BILIOUS PILLS.

These PILLS have been used by Dr. Newcomb in his private practice for a number of years, and always with most satisfactory results, and they are now offered to the public with the conviction that they will accomplish that is claimed for them. They are compounded entirely of Vegetable remedies and are harmless at all times, even to the most delicate constitutions, yet sufficiently penetrating to remove all obstructions and impurities from the most vigorous and robust. As a dinner pill they cannot be surpassed. Price 25 Cents. Sent by mail on receipt of price. See Certificate, page 48.

Messrs. ROBERT V. BARKER & Co.,

Dear Sirs,—Enclosed please find one dollar, for which please send me by mail five boxes Dr. Newcomb's Pills. I have been using them among men for some time and also take them myself; I would not go to sea without them. Your Dr. Newcomb's Liniment is the best I ever used for external use.

CHEMICAL LABORATORY, 61 Prince Wm. Street, St. John, N. B., Canada, Sept. 10th. 1880.

This is to certify that I have made a careful examination of the "German Condition Powder" manufactured by R. V. Barker & Co., of St. John, N. B. The sample examined was selected at random by myself. As compared with other Condition Powders in the market, I find the "German" to be equal to any in purity and strength, and superior to several samples which I have examined. If used according to directions the "German" will be found a perfectly safe, and efficient medicine, for Horses, Cattle, Swine, Sheep, Poultry, etc., etc.

Price 25 cts.

WILLIAM F. BEST.

### Progress of Agriculture.

The progress made in scientific agriculture in this country is something marvelous, though, as it is made step by step, it may not attract the eye. For instance, the processes of handling milk, one of our most important products, and the old methods may be said to have been revolutionized within the last ten, it may almost be said within the last five, years. We had first the Hardin method, and then an improvement upon that, commonly known as the Cooley method, both of which entirely upset our old notions in regard to the temperature of setting milk for cream; and now comes a great improvement, as it seems, upon both, by which the cream is completely separated from the water of milk by the centrifugal process, in an incredibly short time,—from eight to fifteen minutes,—so that it is now possible to take milk directly from the cow and convert it into first-class butter in less than an hour's time.

The utility of this method can hardly be fully appreciated without considering the power which it gives of saving all the surplus supplies of milk sent to large cities, so that hereafter none need be lost. It is claimed, also, that spoiled or damaged milk can be treated by this process and wholly restored, and utilized for the manufacture of butter. It is, perhaps, premature to say that it is capable of doing all that is claimed for it by interested parties; so far as we can see now, it is a vast step in advance of anything we have in our methods of treating milk, and bids fair to be of untold advantage to the producers of milk and to the whole country. It will give facilities for handling milk economically on a large scale, at comparatively little cost, while small machines, for use in small dairies, will vastly simplify and shorten the work which this business has always involved. It must be regarded, we think, as comparably the most important step of progress that the past year has witnessed.

Then, again, a simple process has been discovered by which fruits and vegetables can be preserved for a great length of time by coating them with a harmless solution by which they are practically hermetically sealed, without in any manner disfiguring them. We have seen green cucumbers preserved in this way for many weeks, and, when cut open, showing all the freshness and for which they had when first coated in July. In fact, no one could have told from the external or internal appearance that they were not taken quite recently from the vines. In like manner water-melons, pine-apples, potatoes, grapes, peaches, and other fruits, were preserved, so that they had made a long voyage from Boston to Liverpool and back, and still retained apparently their original freshness. If this simple and inexpensive process should be, on further experiment, to be all that it now promises, it will be of untold advantage to the growers of fruits and vegetables for sale, to commerce, and to humanity.

These examples, with many others that might be mentioned, serve to show that great and tangible progress has recently been made in agricultural industry, and we may still continue to look for greater and even more astonishing results in the future.
